

Batch #12 / Front-End ClassRemote Learning Assignment - Week 1

Assignment 1: Git and GitHub Page

Follow this [document](#) to host your own website on Github Page and take steps below to hand in your assignments:

1. Create a new repository named remote-assignments in your GitHub account.
2. Create folders in this repository for each week. For example: folder week-1 is for all the files you like to submit in week 1. You may create arbitrary subfolders if required.
3. Manage and submit your work to GitHub by any Git tool.

Reminder: this assignment is very important for coming tasks in the next 3 weeks. You have to complete it anyway!

Assignment 2: RWD Page Layout in pure HTML/CSS

Apply any HTML, CSS techniques without Bootstrap, JQuery or other libraries to accomplish following RWD page layout requests. You can find a lot of elegant icons in Iconfinder (<https://www.iconfinder.com/>).

Basic Principle: your layout width should never exceed screen width in all the sizes of devices. You can use [Chrome Device Mode](#) to get quick layout tests.

Request 1: Layout when screen width > 1200px

Key Points:

1. Website Title / Logo in the navigator should align to the left.
2. Menu Items in the navigator should align to the right.
3. Total width of content boxes should be fixed in 1200px. (What I mean is, for example, the sum of width of content box 1 and 2 should be fixed in 1200px, even if the user's screen width is much larger than 1200px.)

Remote Learning Assignment - Week 1

Request 2: Layout when screen width > 800px and < 1200px

Key Point:

1. Total width of content boxes should scale automatically with screen width.

Remote Learning Assignment - Week 1

Request 3: Layout when screen width > 500px and < 800px

Key Point:

1. Menu Items in the navigator should be replaced by a menu trigger icon.

Assignment 3: Google Developers Page (Advanced Optional)

Imitating a web page in the real world is a good way to improve your skills. Your work is to create a web page, looking like [Google Developers](#), as possible as you can!

Reminders:

1. Ensure you can handle assignment 2, before you get stuck in this one.
2. Before you start coding, look and play the target page carefully, especially on the layout changes among different screen resolutions.
3. If you can, take care of all the details: sizes, spaces, colors, dimensions, etc. That's what you can really stand out from others.
